Current Status of Biodiversity in New Guinea – Species Diversity:

Vertebrata about 3,764 species (2,650 species fishes, 130 species frogs, 15 species turtles, 2 species crocodiles, 141 species lizards, 83 species snakes, 552 species birds and 191 species mammals) and invertebrate around 200,000 species (Allison 2007: 480). **Vascular plants between 20,000–25,000 species (Supriatna et al. 1999, Takeuchi 2007).**

Collection Density (GBIF 2019):

Our knowledge of biodiversity in New Guinea is still incomplete and based on uneven collection activities

West Papua Conservation Priorities under Climate Change

1,500 Endemic Plants (RCP8.5)

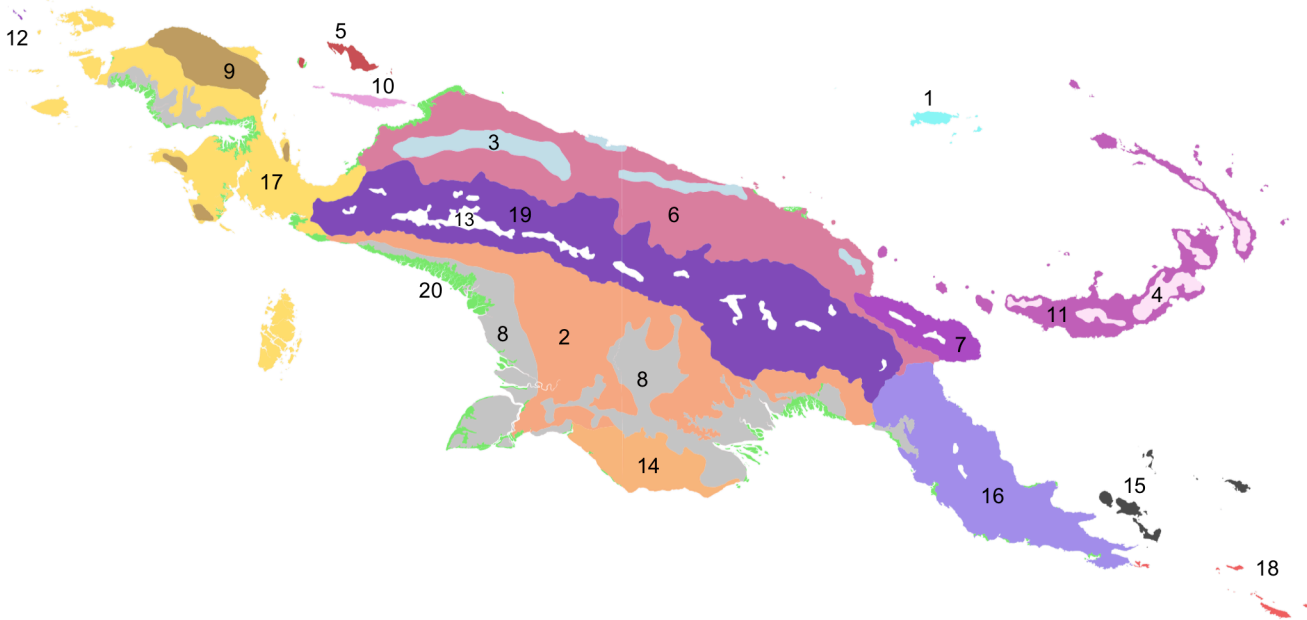

Endemic plant species richness (number of species per grid cell) in the face of climate change. Species richness under current climate (A), and difference in species richness between current climate and 2070 RCP 2.6 (B) and 2070 RCP 8.5 (C).

Camara-Leret et. al. (2019).

Change in species richness across New Guinea's ecoregions under future climate (2070 RCP 2.6 and RCP 8.5). Change in species richness per ecoregion was calculated using stacked Species Distribution Models (SDMs) of 2353 endemic species.

- 1. Admiralty Islands lowland rain forests
- 2. Southern New Guinea lowland rain forests
- 3. Northern New Guinea montane rain forests
- 4. New Britain-New Ireland montane rain forests
- 5. Biak-Numfoor rain forests
- 6. Northern New Guinea lowland rain and freshwater swamp forests
- 7. Huon Peninsula montane rain forests
- 8. Southern New Guinea freshwater swamp forests
- 9. Vogelkop montane rain forests
- 10. Yapen rain forests
- 11. New Britain-New Ireland lowland rain forests
- 12. Halmahera rain forests
- 13. Central Range sub-alpine grasslands
- 14. Trans Fly savanna and grasslands
- 15. Trobriand Islands rain forests
- 16. Southeastern Papuan rain forests
- 17. Vogelkop-Aru lowland rain forests
- 18. Louisiade Archipelago rain forests
- 19. Central Range montane rain forests
- 20. New Guinea mangroves

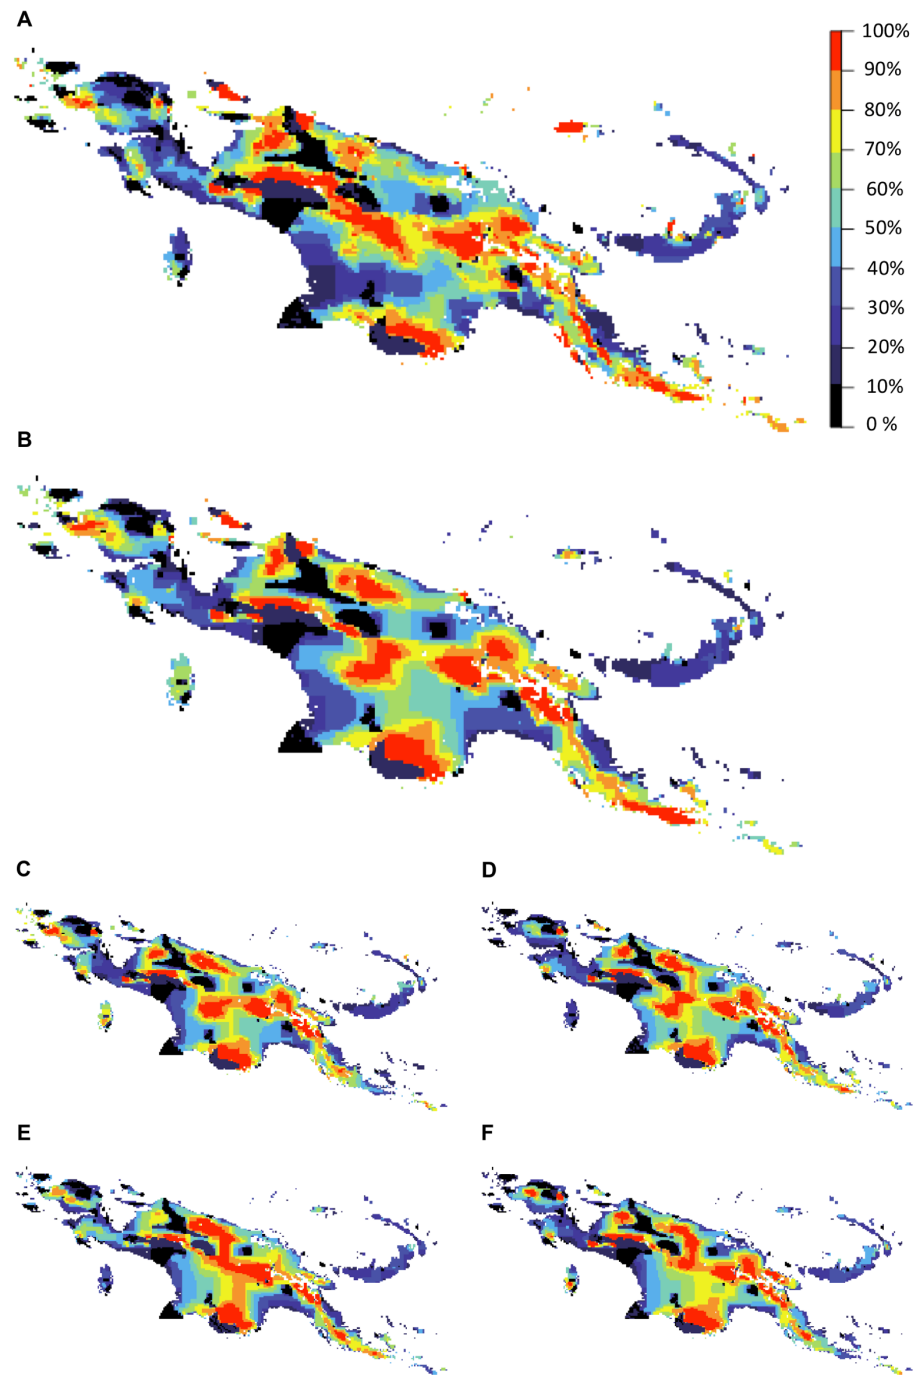

Camara-Leret et. al. (2019).

Change in endemic useful plant richness across New Guinea's language areas by 2070 RCP 8.5. Change in species richness per language area over time was calculated using stacked SDMs of 720 endemic useful species.

Camara-Leret *et. al.* (2019).

Spatial conservation priorities for endemic plants in the face of climate change. All endemic plants (n = 2353 species) (A), all endemic useful plants (n = 720 species) (B), and subset of useful plants for construction (n = 374) (C), culture (n = 271) (D), food (n = 162) (E) and medicine (n = 187) (F).

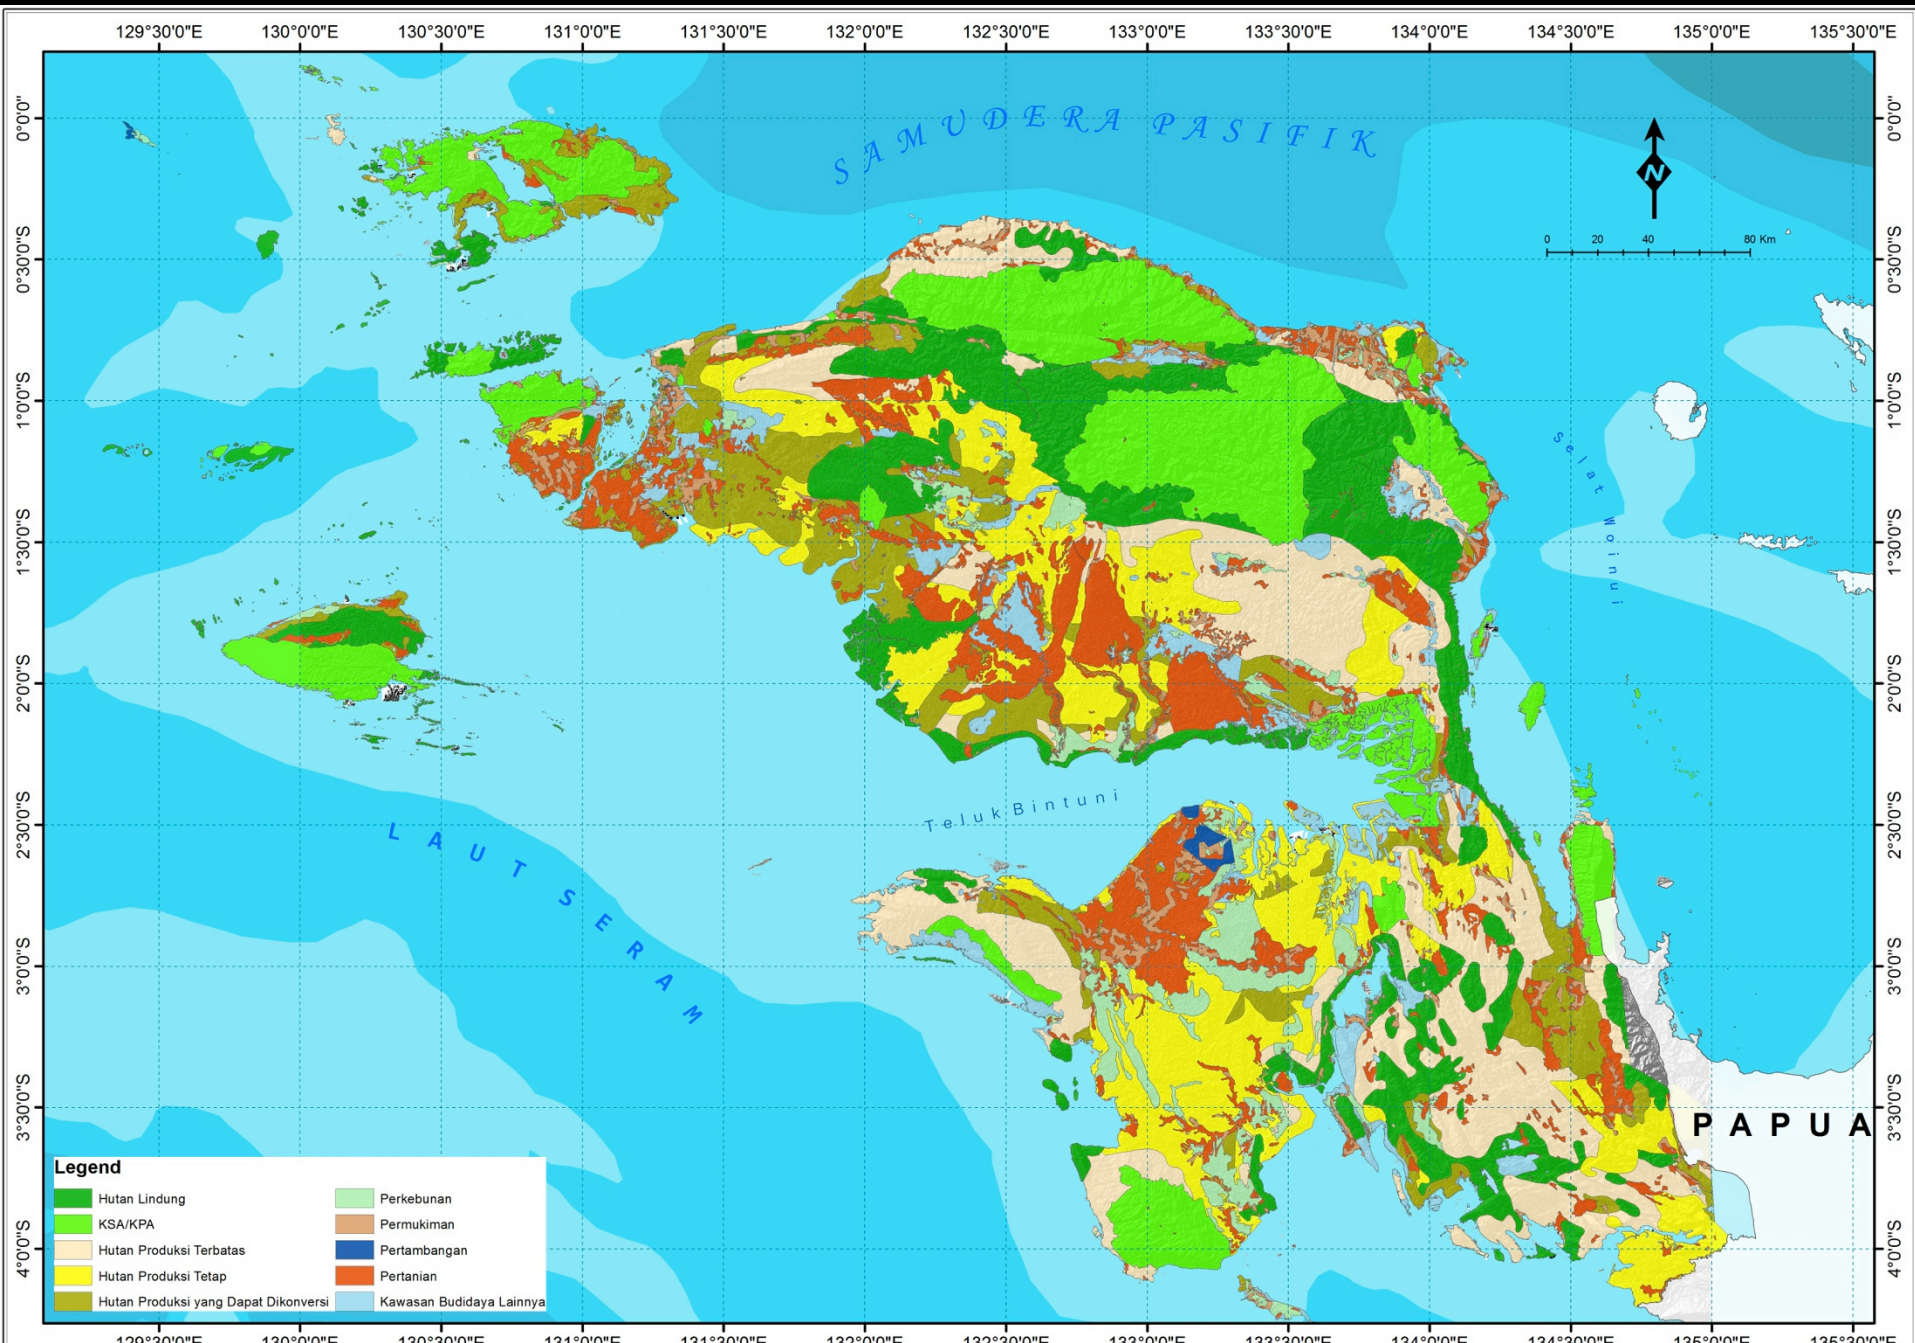

Camara-Leret *et. al.* (2019).

Declaration of West Papua as the first Conservation Province in Indonesia 2015 and followed by Manokwari Declaration 2018.

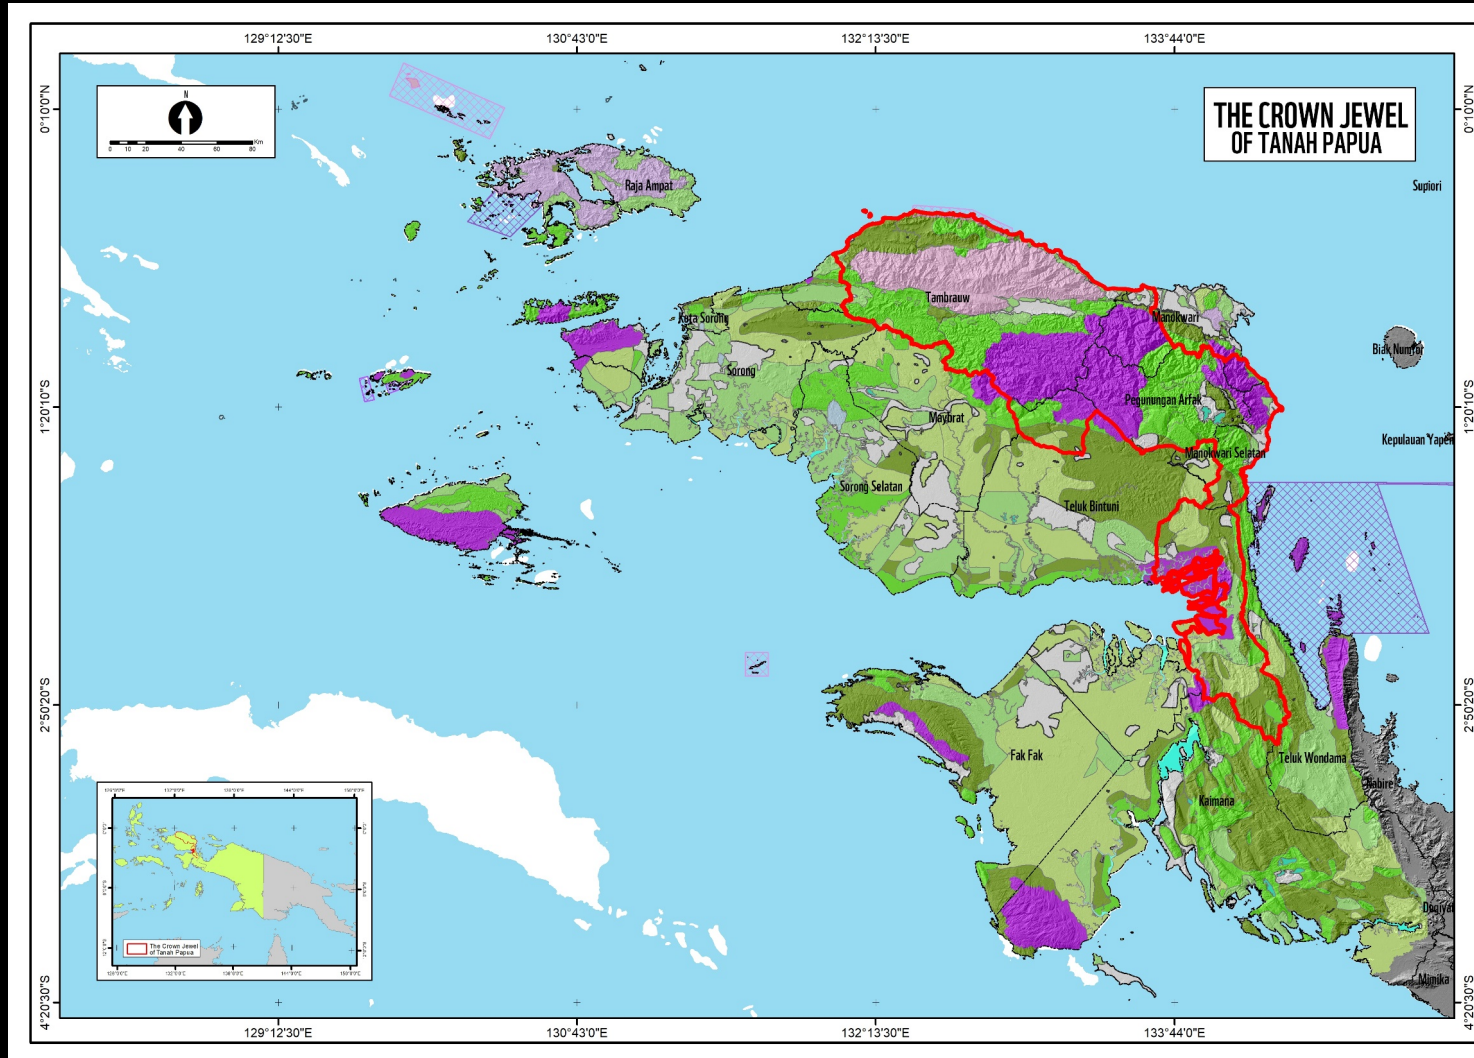

A commitment of all stakeholders to protect and preserve minimum 70% of forest covers and 50% sea and coastal area in West Papua – increase the protected areas.

Spatial Planning Map of West Papua Province
