Ministry of Forestry &
DG of Forest Protection and Nature
in collaboration with
Green Turtles Initiative, Indonesia

Biodiversity of Species in the Region

Trends and Analyses

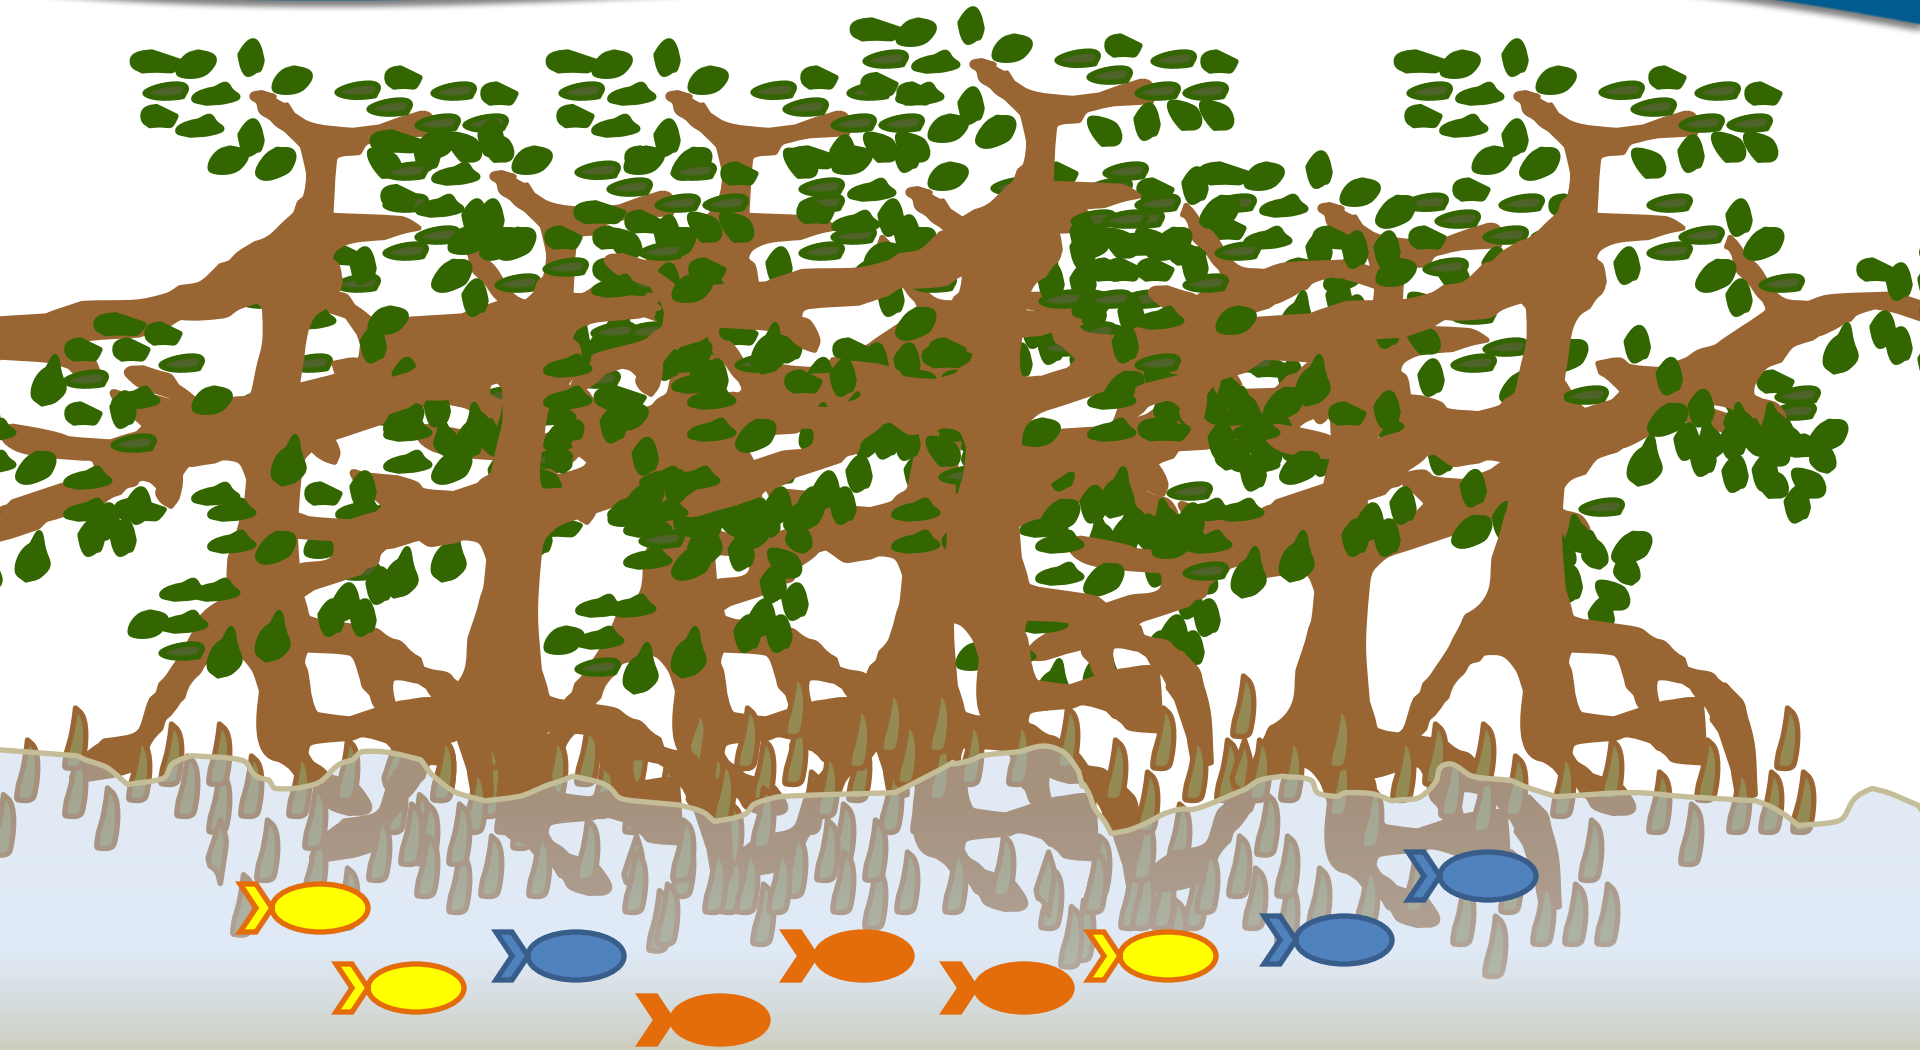

PROTECTED AREAS GAP ANALYSIS IN THE ASEAN REGION

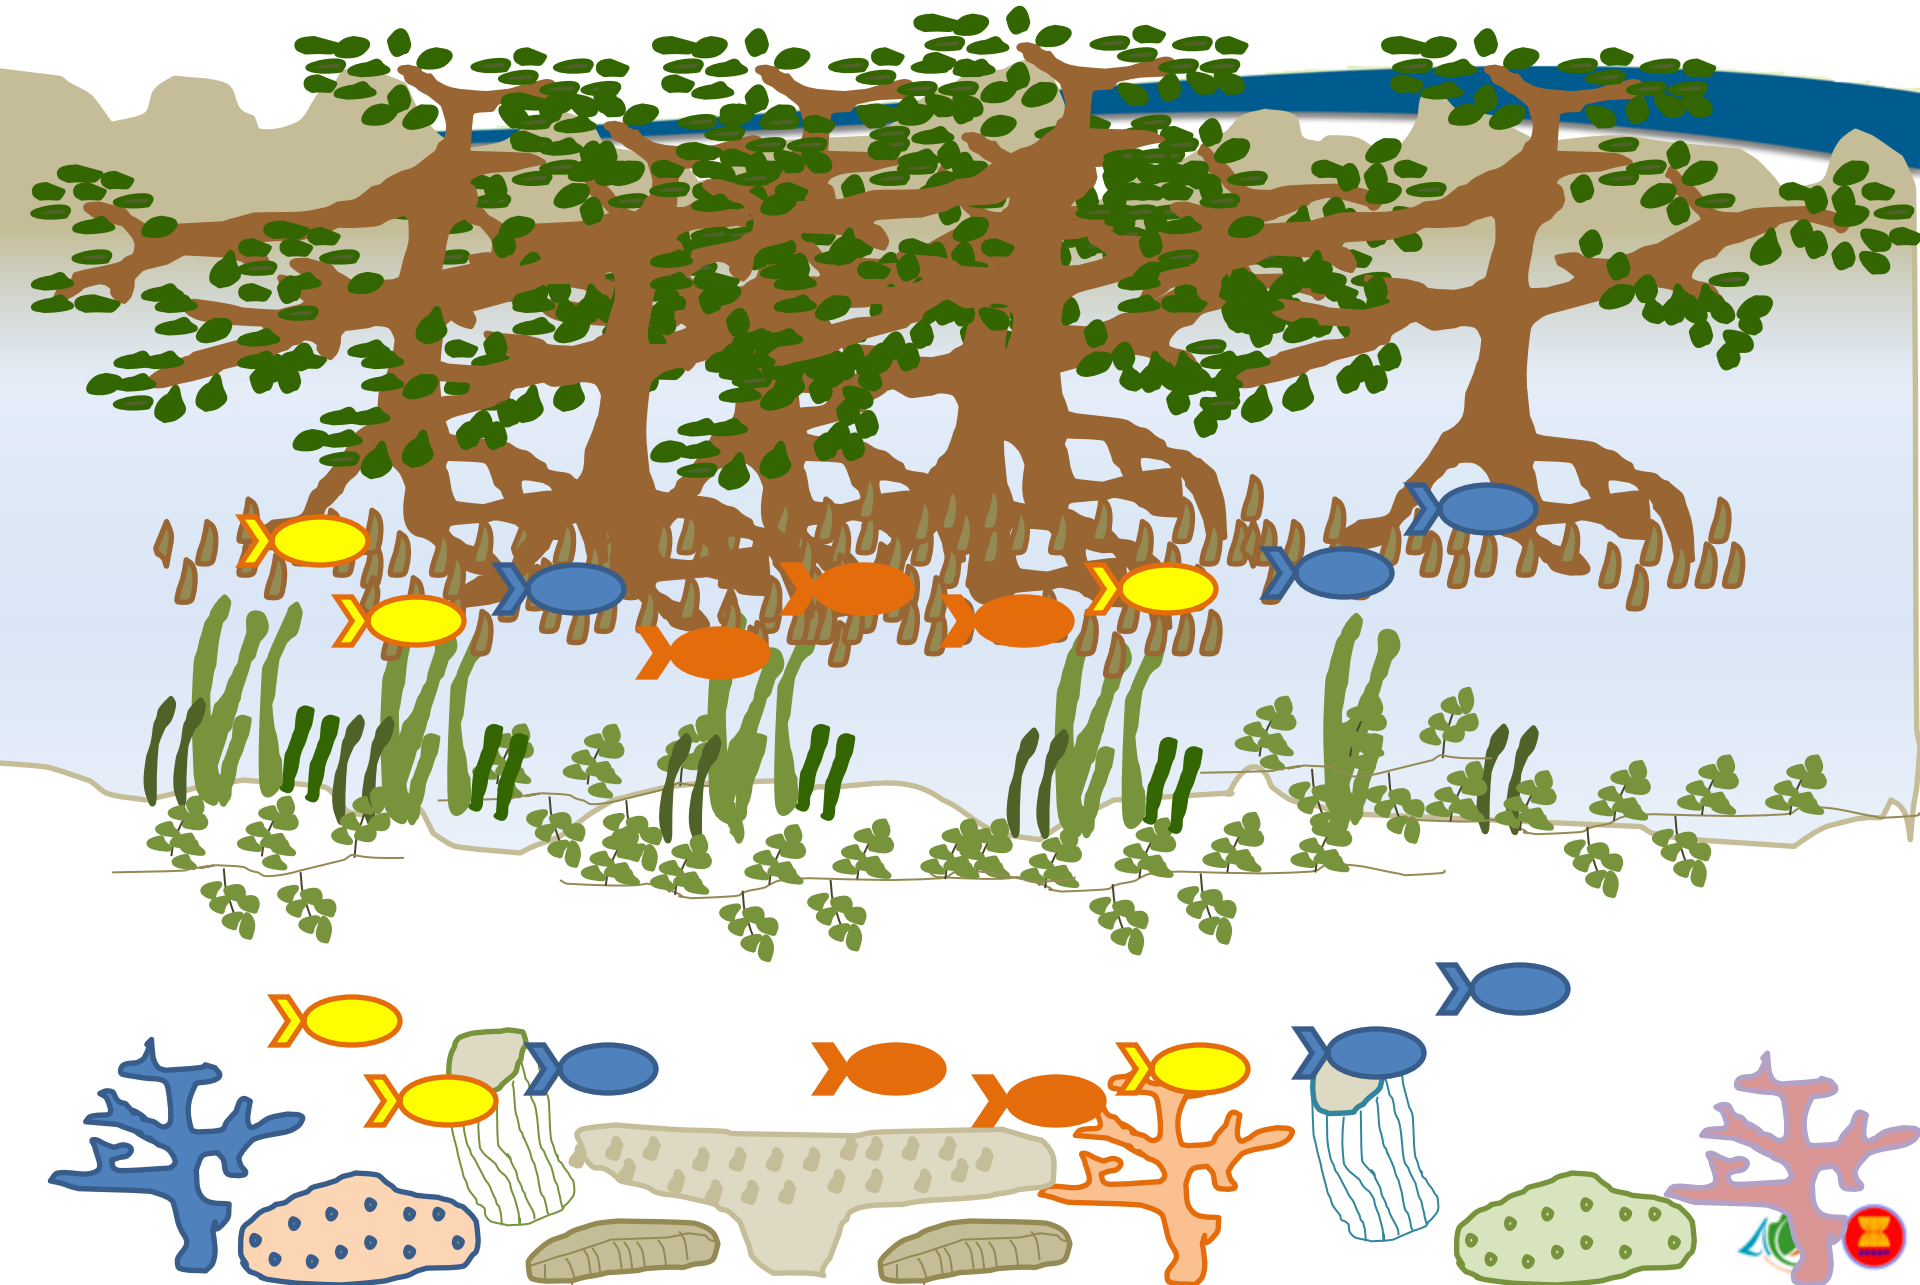

- Compiled from country reports for both terrestrial and marine protected areas gap analyses
- Methodology based on CBD Technical Series No. 24: Closing the GAP: Creating Ecologically Representative Systems

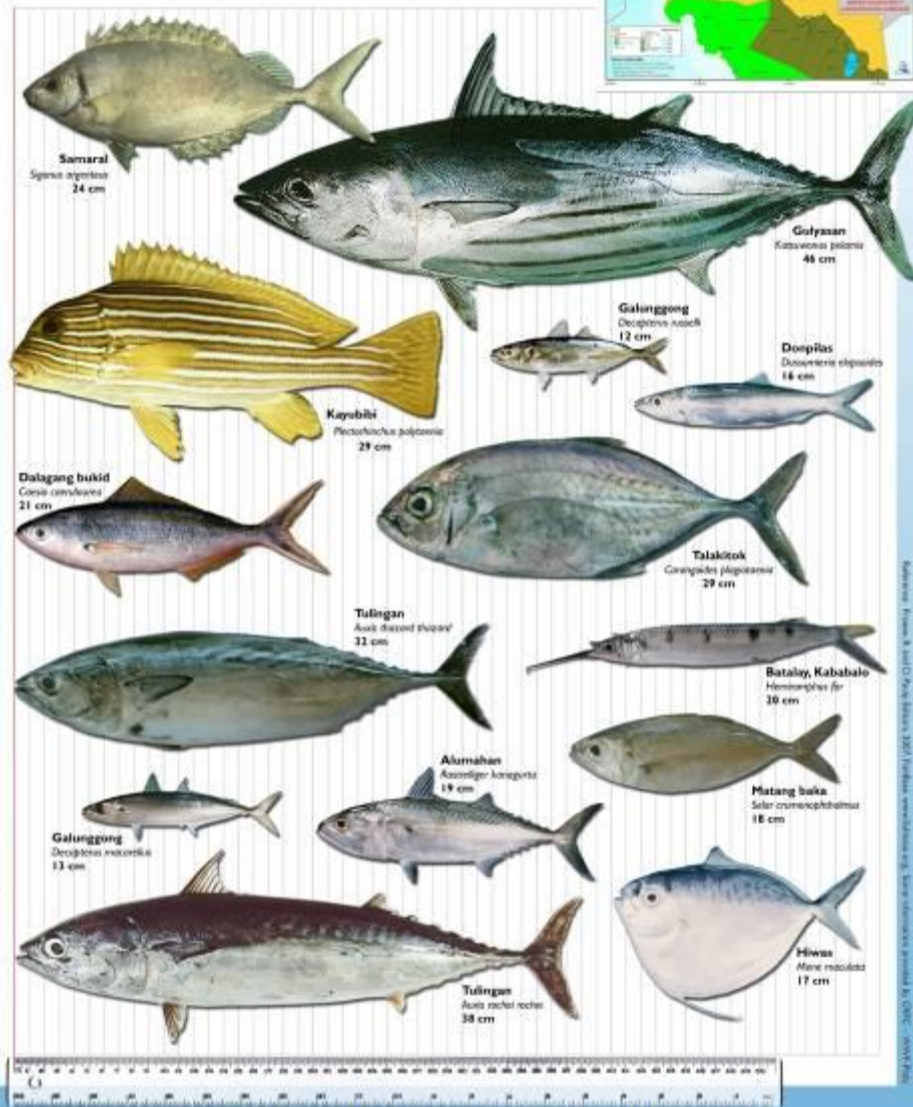

Promotion of Mangrove Reforestation

Conservation of Habitat and Species Interactions

**Size at Maturity for Some Commercial Fishes
of the Verde Island Passage Marine
Biodiversity Conservation Corridor**

Promote fish harvests at sizes beyond their length at first maturity.

This poster shows the length at first maturity of commercially important fish in the passage. Fish represented here were sourced from the information collected from surveys and through market interviews

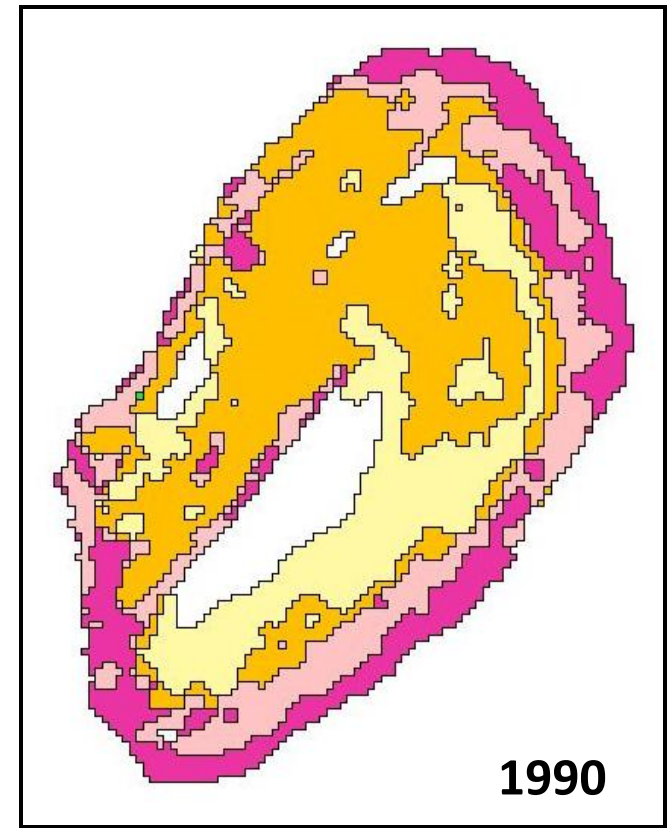

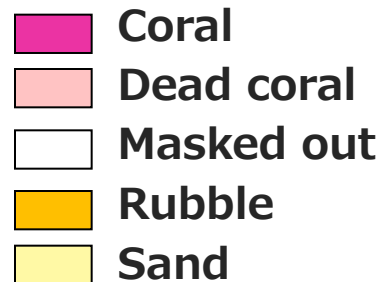

Smaller Fish Cannot Reproduce!!!

Future Prospects: Nice to have

Annual / time-bound ecosystem maps for

- Visuals from data for monitoring ecosystem changes
- Policy reference
- PA prioritization at the national and local levels
- MEA Reporting

At the ASEAN Centre for Biodiversity, we work with governments and all sectors of society in conserving and protecting Southeast Asia's mega-diverse but highly threatened biological resources. Together with the ten Member States of ASEAN, we support the International Day for Biodiversity 2012 theme on "Marine Biodiversity and its Importance to Humanity".

Who do we find out about today?

I'm the SAWFISH! Only a few of a kind.
Through ACB you will learn how to save me.

CLICK the FISH

Dear Friends of Biodiversity!
As we welcome the New Year 2012,
we highlight the celebration of the
International Day for Biodiversity on
22 May with the theme "Marine
Biodiversity". Among the most
endangered marine life is the sawfish,
a peaceful creature that looms
underwater and endangered in nine
out of ten countries in the ASEAN
region. Together, let us protect our
seas and maintain our rich coastal and
marine resources, like the sawfish, for
our future generation.

Find out how we eat and feast!

Dear Friends of Biodiversity!
As we welcome the New Year 2012, we highlight the celebration of the International Day for Biodiversity on 22 May with the theme "Marine Biodiversity". Among the most endangered marine life is the sawfish, a peaceful creature that looms underwater and endangered in nine out of ten countries in the ASEAN region. Together, let us protect our seas and maintain our rich coastal and marine resources, like the sawfish, for our future generation.

All species of sawfish are critically endangered as they are hunted for their liver oil for use as medicine and their fins as delicacy.

Photos by Andy Nurch

Sawfishes sleep during the day and hunt at night. Their saw-like snout, a most eye-catching feature, is covered with motion and electronic sensitive pores that allow them to detect movement, even if their prey is buried in the ocean floor. Although they lack a swim bladder, their large, oil-filled liver keeps them buoyant underwater.
